

JK Coilover Conversion

Poly Performance has just released the all-new Jeep JK Coilover/Air Bump Conversion Kit, the ultimate way to add capability to any aftermarket JK suspension system. This weld-on conversion allows you to run 2-inch-diameter coilovers or up to 2.5-inch-diameter air shocks with 12 to 16 inches of travel. The kit also allows for easy ride-height adjustments, spring-rate adjustments, and compression/rebound damping adjustments. At each front corner, the optional Front Air Bump Kit introduces race-proven hydraulic bumpstops as a secondary suspension to further minimize those harsh impacts on the trail. All mounting components are engineered to be compatible with common body lifts, onboard air systems, and most suspension systems.

Clean Up Your Workspace

RaceDay peel-and-stick floor tiles from Better Life Technology were developed to provide an easy-to-install floor covering solution that looks great in any room. They are especially well suited for garages, workshops, and basements because they are impervious to water, salt, oil, gas, and gravel. These tiles are made from 100-percent solid virgin vinyl to create a beautiful floor with an extremely tough gloss finish surface that will handle the most demanding conditions. The result is a floor covering that not only looks great but also is backed by a five-year warranty. **Info:** Better Life Technology, 913/894-0403, www.blitlc.com **FW**
