

clock is made from a chrome-plated metal shell with a glass face and double neon—white on the outside and blue on the inside. The Graphics Express website has a number of Mustang and Shelby clocks, along with signs, so check them out at www.graphicsexpress.com.

DOOR-DING PREVENTION ▼

More than likely, your Mustang shares the garage space with another vehicle, perhaps one driven by your spouse who may be oblivious to your repulsion to door dings on your Mustang. A new product called the DoorPal could be the answer to your prayers. An inflatable protection panel, the DoorPal can be suspended from a garage ceiling using a proprietary safety release or attached to a wall where car doors are most likely to be damaged. Measuring approximately 100x34x4.5 inches when inflated, the DoorPal is designed to protect cars side by side, regardless of height, and it's transparent. It's currently available online at www.doorpal.com.

RACING STOOL ▶

Ford Racing offers a cool barstool as part number M-77602-A. Black with a blue-and-red Ford Racing logo, the stool features four chrome legs with supporting rings. A second version with a seatback (PN M-77502-B) is also available. Buy it from Ford Racing distributors or by calling 888/380-6901. Visit the website at www.fordracingparts.com.

G-FLOOR TECHNOLOGY ▼

The G-Floor from Better Life Technology is an easy-to-install garage floor covering that rolls into place to protect the floor and provide easy cleanup for liquid spills. The G-Floor was developed by BLT cofounder Brett Sneed, who wanted a product that could transform the garage's appearance, install in seconds, and last for years. He and his father brought to market a specially formulated 10-foot-wide, roll-out polyvinyl pad with channels to direct runoff out the door. To install, roll the G-Floor out over the floor and trim the edges. Easy to clean and impervious to oil and other fluids, it also prevents dirt from migrating across the floor. Easier to install than coatings and snap-

together systems, the G-Floor is available in a variety of colors and patterns. Contact Better Life Technology by calling 913/894-0403 or visit www.bltlc.com.

HOME WELDER ▼

Most Mustang owners don't need a heavy-duty shop welder in their home garage. However, it's nice to have one available for smaller jobs, like welding up a broken seat frame. The MIG 130 from HTP America is designed for the do-it-yourselfer with four heat settings, an infinite wire feed adjustment, 7-foot welding gun, 5-foot ground cable, and 6½-foot input power cord. It operates on 110 volts, so you can plug it in anywhere. With 130 amps of power, it can weld anything from thin sheetmetal to ¼-inch steel. The MIG 130 welder uses both 8- and 4-inch diameter spools of wire and comes ready to weld with extra tips and a roll of .035-inch flux cored gasless wire. For more information, contact HTP America at 800/872-9353 or visit the website at www.usaweld.com.

DREAM GARAGE ▼

Remember flipping through toy catalogs when you were a kid? Well, you can relive that feeling as an adult by browsing the Craftsman Power and Hand Tools catalog, where you can find all types of storage cabinets, tool chests, workbenches, and even flooring for your garage. At the center of the photo below is an 8-foot workbench with an overhead backwall system and wall cabinet. At the left is Craftsman's Professional Floor Cabinet, available with shelves or with locker-style storage. The 28x36 Professional Five-Drawer Mobile Cabinet on the right comes with ball-bearing drawer slides and a reversible two-in-one work surface. The flooring is available as 12x12-inch slip- and solvent-resistance tiles. You can find some of the items at your local Sears store, while some are available only through the catalog or at www.sears.com/shoptools.
