

PREFERRED FOR PARKING

Your garage or shop is also a show space, especially when friends come over. But the typical shop floor, while a great surface for building and re-building your Mopars, needs help in the looks department. That's where these parking pads from Better Life Technology (BLT) come in. They roll out and lay flat, creating a beautiful, rich space that complements and showcases your car. They're available in two surface patterns and three sizes (10x20 feet, 7.5x17 feet, and 5x10 feet), and

they're extremely durable and heavy enough that they don't need to be glued down in normal applications. (For heavy-duty use, BLT offers adhesives designed to work well with the pads.)

ANOTHER RALLYE DASH RESTO MUST-HAVE

Remember the 1970 B-Body Rallye Dash trim pieces from Tony's Parts we brought you a while back? Tony's has done it again...they've come out with a reproduction under-dash trim piece for these Plymouths and Dodges. It's made from injection-molded plastic with the correct grain pattern as the originals, it fits in place of that cracked, modified or missing OEM piece, and it complements the three-piece Rallye Dash trim piece kit that's already available from Tony's Parts. It fits all 1970 Chargers, Coronet R/Ts and SuperBees, Road Runners, GTXs and Superbirds that were factory-equipped with the Rallye dash, and it's in stock right now and ready to ship.

It's already known that ProCharger makes the largest, most repeatable power. But to truly see the difference, make back to back hits with no cool down time and the advantage becomes even more clear. ProCharger was the first manufacturer to offer complete supercharger systems for 6.1 and 5.7 HEMI's, back in 2007. With continued industry and HEMI leadership, **ProCharger is first once again for 392 Challengers and Chargers.**
